

Enable agile features in team-managed projects

This page is for team-managed projects

If the lower-left of your project sidebar says **you're in a company-managed project**, check out [these company-managed project articles](#) instead.

Learn more about [the difference between company-managed and team-managed projects](#).

Team-managed projects and boards allow you to switch on any features you need, and ignore the ones you don't. We recommend only enabling the features your team needs and disabling everything else. This way, your project doesn't get cluttered and your team can focus on the things that matter.

To enable agile features:

1. If not already there, navigate to your team-managed project.
2. In your project sidebar, select **Project settings** > **Features**.
3. Use the toggles to enable and disable features for your project.

[Questions, discussions, and articles](#)

Enable and disable team-managed pages to keep track of project content in Confluence Cloud.

[View topic](#)

Enable releases and versions

Enable and disable releases and versions to group project work into milestones.

[View topic](#)

Enable code

Enable the Code feature to begin linking and displaying your team's repositories in your project.

[View topic](#)

Enable the project issue navigator

Enable and disable the project issue navigator to search for issues in your team-managed project.

[View topic](#)

Enable reports

Enable team-managed reports to track and analyze your team's work throughout a project or sprint.

[View topic](#)

View and understand the team-managed burnup report

Use the team-managed burnup report to track your team's progress as they complete a sprint.

[View topic](#)

Understand the team-managed cumulative flow diagram

Use the team-managed cumulative flow diagram to see which columns accumulate more issues than others.

[View topic](#)

View and understand the team-managed velocity report

Use the team-managed velocity report to predict the amount of work your team can do in future sprints

[View topic](#)

View and understand the team-managed sprint burndown chart

Use the team-managed sprint burndown chart to predict your team's likelihood of completing their work in the time available.

[View topic](#)

Enable code information

Integrate source code management tools like Bitbucket, GitHub, or GitLab with your team-managed Jira Software project.

[View topic](#)

Enable deployments

Enable the Deployments feature to begin tracking the progress of a work-item as it moves through your deployment pipeline.

[View topic](#)

Specify a date range for your deployments

Are you concerned about past deployments and wish there was an option to extract and view data for a specific timeframe?

[View topic](#)

View and understand your deployment insights

Make different insights available for your projects, and see how they can help your team stay on track.
