

Support for Scrum@Scale

No matter your approach to scaling agile, we're here to help.

Scrum@Scale (S@S) is a framework for organizations that already have Scrum successfully working at the team level and are looking to implement it throughout the organization. It's an extension of the Scrum framework from one of the co-creators of Scrum, Jeff Sutherland. The main goal is to align growing organizations around a common and shared set of goals. Coordination is managed through a Scrum of Scrums, which is comprised of Scrum Masters from each team, and a MetaScrum, made up of product owners.

How Jira Align supports Scrum@Scale

Dependencies

Reduce delays with dependency management and see the results of better coordination and work across teams.

Roadmaps

Create and communicate a shared vision at the team and team-of-teams (Program) level for what the organization will build and release over time.

Risks

Improve visibility and drive mitigations leveraging successful risk management model like ROAM to manage and reduce risk.

Team visibility

Maintain the connection to your current Jira, TFS, or many other team tools and manage the data at the Team of Teams level.

Team rooms

Bring teams together for meetings and chats while you monitor team progress at the sprint level, connecting it to strategy.

Unified work tree

Get an overview of all work items in a PI and a drill-down hierarchy of progress at each work item level, by strategy, across teams.

Team meetings

Plan, execute, and track work in online ceremonies with a live view of how everyone is doing and where you are blocked.

Kanban

Visualize the work flowing through the system while limiting work in progress so the system matches its capacity.

Lean UX/UI

Stakeholders vote on the design of a Lean use case tied to personas and experience maps.

Forecasting

Allocate epics, features, or capabilities among teams and achieve a good fit within the release.

Story maps

Organize your product backlog and frame the user journey as it is tied to execution.

Themes

Refine strategy, allocate budget to investment themes, manage program funding, and assess budget vs. value.

“Knowing what's in the backlog, what's in work, what's next, is critical. Being able to answer those questions quickly and accurately is definitely where we want to be. [Jira Align] provides that.”

MAX GIRARDI

Product Owner Australian Tax Authority

Explore benefits for all types of roles

Portfolio management

Communicate the value of funding strategic initiatives to investors, analysts, and employees.
